## Electrical and Electronics Engineering Practice EEME20002

### Assessment Brief 2025-26

---

The summative assessment for this unit is composed of

- A. *Coursework Portfolio (50%)*. This consists of five components that are detailed in this document.
- B. *Summer Exam (50%)*. This is a two-hour, in-person written exam which tests your knowledge in the Digital Design material covered in TB1 (1 hr, 25%) and the Systems and Control material covered in TB2 (1 hr, 25%).

### Coursework Portfolio

The following components constitute the coursework portfolio, your summative coursework for the unit. They are worth a combined 50% of the total unit mark:

**1. Personal Development Plan (Individual, Must Submit, Submit anytime throughout the year):**

The Personal Development Plan is your opportunity to reflect on your personal development and to set yourself goals for the coming year and beyond. It is a *mandatory submission* to meet your life-long learning Intended Learning Outcome (ILO) for the unit. The form has been designed in accordance with based on the industry's UK-SPEC competencies. It can be completed and submitted at any time throughout the year. The plan will not be assessed as it is personal to you and your aspirations.

**2. Project Plan (Group, TB1, Must Submit Formative):**

You will submit a project management plan at the end of TB1 detailing how you plan to tackle the group project in term two. The plan will include items such as a Gantt Chart, Risk Register, Work Breakdown Structure, Roles and Responsibilities and Project Charter. More details and examples will be provided in the Project Management lecture series. This formative assessment is mandatory to evidence engagement with the tools and methods taught in the course. Feedback will be provided to each group which they can use to revise their plans going into the group activity in TB2.

**3. Digital Design Practical Quiz (Individual, Must Submit, TB1):**

This submission is based on a designated mandatory laboratory practical which individual students must complete and is conducted in TB1. You will be completing weekly laboratory-based tasks on Blackboard for which feedback is provided by your Team Lead. A Digital Design Practical Quiz document, containing all your submitted weekly tasks, is to be submitted at the end of TB1. Your submitted tasks must achieve a minimum passing threshold according to the Practical Laboratory Marking Scales document to be made available shortly. *Failure to achieve the pass threshold on this practical logbook component will result in automatic fail mark on the unit.*

**4. Project Review Video and Documentation (Group, TB2, 15%):**

You are required to submit a video reflecting on how you managed your project. A slide deck template is provided, and each member has to present at least one project management area (e.g., plan, risk register, lessons learned, IP). A copy of your project management material (e.g., management workbook, meeting minutes, and plan) must also be submitted as evidence to what has been reported in the video.

**5. Digital Design Project (Group, TB2, 35%):**

This is the culmination of your technical project and is composed of a group technical report and a submission of associated code and executables. The technical report should include a clear description of the work division as well as a peer assessment table. More details will be provided at a later date.

**Important:** In preparing your coursework, please note that the use of AI tools is classified as category 2 (minimal) as explained in the guidelines on use of AI in assignments at the University of Bristol. Please make sure you read what this means at the following link <https://www.bristol.ac.uk/bilt/sharing-practice/guides/guidance-on-ai/using-ai-in-assessment/>
